

## BDC-66 DUST COLLECTOR

### LARGE SIZED BUT COMPACT INDUSTRIAL DUST COLLECTOR

The Blastrac BDC-66 dust collector is a compact and insulated unit, easy to transport, without risk of damages and with reduced noise level. The Blastrac BDC-66 is a heavy duty dust collection system that is designed for its compact power and maneuverability. It combines power, efficiency, safety, and productivity all into one durable machine. The Blastrac BDC-66 can be equipped with a Longopac bagging system, big-bag system or dust bin kit which is easy to mount and handle. The Blastrac BDC-66 dust collection system is standard equipped with a M-class cartridge filter or optional H-class filter kit.

For a safe, dust free and perfectly clean jobsite Blastrac has designed a full range of consumables and optional items to get the best possible results out of your dust collector.

### USER FRIENDLY

Easy to manoeuvre and transport due to the robust wheels with brake systems. User friendly design, just connect the hose to the dust collector and you are ready to go.

### SAFE WORKING ENVIRONMENT

Every Blastrac machine should be connected to a Blastrac industrial dust collector. This means that you are able to work dust free, creating a safe working environment.

### FOR HEAVY DUTY WORK

Our range of large dust collectors is especially created to be connected to our large surface preparation machines. Working with large machines means that more dust is created. The high suction power, filter options and large dust bin/bag capacity of these dust collectors make sure that all dust is safely collected.

SCARIFIERS AND SHOT BLASTERS

### GREEN TECHNOLOGY

Our dust collectors, like any other Blastrac machine, do not use any chemicals or waste valuable drinking water.

### CONTINUOUSLY WORKING

Limited downtime is essential for any successful job. Our large dust collection systems allows you to change the dust bin/bag while the machine is still being used.

### SEPARATE FILTER & COMPRESSOR

Fan and compressors are able to be switched on and off separately, this enables more effective cleaning of the filters, without having to run the fan unit.
